

Participate in EWB-USA's First-Ever Virtual **GLOBAL INNOVATIONS FORUM**

**Saturday, April 6, 2013
10 a.m. to 12:30 p.m. MDT**

You're invited to join Engineers Without Borders USA (EWB-USA) for its first virtual forum designed to engage members from across the country in an exciting learning event about sustainable international development. The forum is presented in partnership with Bridges to Prosperity, iDE-CSI-IEEE, iCATIS and Regis University.

The **Global Innovations Forum: Pathways to Sustainable Development** will feature case studies from leaders in the field and will explore the challenges, successes and important lessons learned on the road to sustainable international development. **Bernard Amadei**, founder of Engineers Without Borders USA, and **Paul Polak**, founder of iDE, will critique each case study and provide their expert perspectives. Participants will be encouraged to tweet their thoughts during the live broadcast via #GlobalForum.

Through a virtual online platform, we will engage EWB-USA chapters from across the country in a discussion of best practices and will promote a new model of education, which blends online content with live presentations and real-time discussions via social media. We encourage participants to review background materials prior to the Forum and come prepared to actively participate.

Professional members can earn 2.5 professional development hours for registering and attending the Global Forum. (Save the registration page for your records.)

To see the complete agenda and to register for the Forum, go to:
